

# Mining actionable insights from the massive volumes of data in smart communities and using IoT and data analytics to facilitate smart digital health and energy systems.

### Competitive advantage

- The most cost-effective way to maximise the value of industrial big data
- Rich and extensive experience in dealing with a variety of problems for smart communities, in particular energy and health
- · Agile implementation and flexible deployment
- World-class, high efficiency algorithms, data analytics and cyber-security solutions supported by IoT enabled sensors and cloud technologies

### Successful applications

- · Smart Grid Smart City national demonstration project
- Energy Internet project
- · Customer data disaggregation framework based on IoT sensor systems
- Time-series data forecasting and uncertainty assessment
- Machine learning algorithms and very fast deep learning algorithms for complex system security assessment
- · Residential demand simulator based on behavioural models
- Fault diagnosis and monitoring through operational data

## Capabilities and facilities

- · Package of machine learning and data analytics tools, both opensource and in-house developed
- IoT enabled monitoring hardware devices and associated data management system
