## Smart Paper Test Strips for POC Detection of Insulin, and Beyond

**Smart paper test strips that can accurately detect insulin in saliva at the point-of-care, offering a replacement for the current ELISA test.**

### Competitive advantage

This paper-based technology can accurately detect insulin to provide point-of-care monitoring for patients with pre-diabetes or diabetes. Advantages include:

- Saliva detection – the technology is non-invasive
- Rapid response times of less than 10 min
- Accurate – comparable to the standard ELISA test
- Highly sensitive (0.03 ng/mL insulin sensitivity, 1 order more sensitive than ELISA)
- Cost-effective (less than \$1 per test strip)
- Stable at room temperature
- Point-of-care disposable strips
- Simple to use with an optical signal readable by eyes, or smart phone
- Smart paper strip has universal applications for early detection of chronic disease biomarkers
- Suitable for resource limited settings

### Impact

- Simple detection of insulin in saliva
- Improved ability to prevent and manage pre-diabetes or diabetes
- Smartphone-based signal readout will improve data collection and management of health data, enhancing capabilities to use big data for machine learning and Artificial Intelligence

### Successful outcomes

- Provisional patent filed (2018904363)
- Start-up in development

### Capabilities and facilities

- Dedicated facilities for making paper
