

# **Hypersonic Flowfield Measurements**

## World leading laser flow diagnostics.

#### Competitive advantage

- Unique combination of state-of-the-art shock tunnel for generating hypersonic flows and laser-based diagnostics for making precision measurements in those flows
- Wide range of laser-based measurement technologies, including laserinduced fluorescence diode laser absorption spectroscopy and resonantlyenhanced shearing interferometry

#### Impact

- Design of more efficient hypersonic vehicles
- Improved understanding of aerothermodynamic heating and drag characteristics of hypersonic vehicles
- Testing validity of computational models

### Successful applications

- Produced the world's first two-dimensional velocity maps in hypersonic separated flows
- Density measurements 100 times more sensitive than existing technologies
- Fastest scanning temperature measurement technology currently in existence (1.6 million temperature measurements per second)
- International collaboration in comparison of state-of-the-art computational methods
- Multiple funding streams including US Air Force programs

#### **Capabilities and facilities**

- T-ADFA free-piston shock tunnel
- YAG-pumped dye laser system
- Diode laser absorption spectroscopy system
